EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Foster on 04/01/2005.

The application has been amended as follows:

In the Specification:

The proposed amendment, attached, has been entered.

In the Claims:

In Claim 10, line 1, the claim identifier "(withdrawn)" has been deleted and --(currently amended)-- substituted therefore.

In Claim 11, line 1, the claim identifier "(withdrawn)" has been deleted and --(currently amended)-- substituted therefore.

In Claim 12, line 1, the claim identifier "(withdrawn)" has been deleted and --(currently amended)-- substituted therefore.

Response to Arguments

Applicant's arguments, see page 6, first paragraph, page 7, lines 7-11 and lines 18-22 and page 8, lines 19-23, filed 06/14/2004, have been fully considered and are persuasive. Accordingly the rejections set forth in the previous Office Action are hereby withdrawn.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the prior art of record, does not teach or make obvious the apparatus of Claim 8, specifically a multiple stage pump for use in a hydraulically controlled fuel injector system comprising: at least two pumps and a first and a second check valve downstream from a first and a second pump; but more specifically at least two means for regulating and maintaining a linear flow control of fluid from the at least two pumps located downstream of the at least two pumps in respectively the same line as the at least two pumps. Said check valves located downstream of at the at least two means.

Spiesser et al. (EP 0 515 965) disclose valves that "regulate or control a volume flow over a wide range in linear dependence" (see abstract). However, the "linear dependence" disclosed by Spiesser et al. is not the same as instant invention and does not fulfill the claimed means plus function which is inclusive of eliminating pressure peaks (see page 7, first full paragraph and Figure 5).

Woody (5,682,845) teaches a valve (see Figure 6) used to regulate pressure peaks (column 8, lines 47-49), however valve 158 regulates pressure peaks in a chamber 114 and does

not regulate and maintain a linear flow control of fluid from at least two pumps. Therefore the function disclosed by Woody is not the same as the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claim Numbering

The claims have been renumbered as follows for allowance. The following table contains the original claim number with the new corresponding claim number.

<i>OLD</i>	NEW	OLD	NEW	OLD	NEW
<i>1</i>	Canceled	<i>10</i>	4	<i>19</i>	Canceled
<i>2</i>	Canceled	<i>11</i>	5	<i>20</i>	Canceled
